Clinical Preventive Health Recommendations for the General Adult & Targeted Populations

Based on U.S. Preventive Services Task Force (USPSTF) A and B recommendations† for the general population and as prioritized by the National Commission on Prevention Priorities. This guideline is not meant to be a comprehensive list of preventive services that may be indicated for a given patient. It is designed to assist clinicians in providing priority preventive services, not to replace a clinician’s judgment. Summary of high risk definitions and all USPSTF recommendations by A, B, C, D, I grade are available at:

http://www.healthteamworks.org/guidelines/prevention.html

**Preventive Services for Adults**

<table>
<thead>
<tr>
<th>Service</th>
<th>Strategy</th>
<th>Summary</th>
<th>Risk assessment tools</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alcohol misuse screening</td>
<td>Screen routinely.</td>
<td>“When was the last time you had 4 or more (women/men &gt;65 yrs.) or 5 or more (men ≤65 yrs.) drinks in one day?” Positive = in the past 3 months.</td>
<td>Men 45-79 yrs. to prevent MI if benefit outweighs risk for GI bleeding.</td>
</tr>
<tr>
<td>Cholesterol screening</td>
<td>Screen men 20-34 yrs. at increased risk. Screen men ≥35 yrs. Screen women 20-44 yrs. at increased risk.</td>
<td>Measure blood pressure. Hypertension is usually defined as &gt;140/90 mmHg (or lower in certain conditions such as diabetes).</td>
<td>Consider discontinuing after age 65 if consistently normal.</td>
</tr>
<tr>
<td>Colorectal cancer screening</td>
<td>Pap smears – q 3 yrs.</td>
<td>Screen women who have been sexually active and have a cervix within 3 yrs. of onset of sexual activity or 21-65 yrs.</td>
<td></td>
</tr>
<tr>
<td>Hypertension screening</td>
<td>q 1-2 yrs. based on most recent levels.</td>
<td>Consider screening high-risk adults earlier. See HealthTeamWorks Colorectal</td>
<td></td>
</tr>
<tr>
<td>Immunizations</td>
<td></td>
<td>Screening guideline for more information about high risk individuals &lt;50 yrs. and individuals with a family or personal history of polyps or colorectal cancer.</td>
<td></td>
</tr>
<tr>
<td>Tobacco use screening</td>
<td>Provide brief counseling (provide feedback with permission and explore motivation to quit); refer to the Colorado QuitLine (1-800-QUIT-NOW/1-800-784-8669); recommend Nicotine Replacement Therapy (NRT); offer pharmacotherapy.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Breast cancer screening</td>
<td>Mammography with or without clinical breast exam – q 1-2 yrs. The decision to start regular, biennial screening mammography before the age of 50 years should be an individual one and take patient context into account, including the patient’s values regarding specific benefits and harms.</td>
<td>Biennial screening mammography for women aged 50-74 years old.</td>
<td></td>
</tr>
<tr>
<td>Chlamydia screening</td>
<td>Screen sexually active women &lt;25 yrs. and all women at increased risk routinely (often done with gonorrhea). Rescreening at 6-12 months may be appropriate if previously infected.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Depression screening</td>
<td>Screen in practices that have systems in place to assure accurate diagnosis, treatment, and follow-up. “Over the past 2 weeks, have you felt down, depressed, or hopeless?” “Over the past 2 weeks, have you felt little interest or pleasure in doing things?” Positive = yes to either question.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Obesity screening</td>
<td>Screen for obesity and offer intensive counseling and behavioral interventions to promote sustained weight loss. Obesity defined as BMI of ≥30 or waist circumference &gt;40 in. for men, &gt;35 in. for women. High-intensity intervention: more than 1 person-to-person (individual or group) session/month for at least the first 3 mths of the intervention. BMI calculator: <a href="http://www.nhlbisupport.com/bmi/">http://www.nhlbisupport.com/bmi/</a></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Osteoporosis screening</td>
<td>DXA of hip – q 2 yrs. or less frequent based on risk. Screen younger women whose fracture risk is equal to or greater than that of a 65-year-old white woman who has no additional risk factors. Risk assessment: U.S. FRAX tool <a href="http://www.shef.ac.uk/FRAX/">http://www.shef.ac.uk/FRAX/</a></td>
<td>Screen all women ≥65 yrs.</td>
<td></td>
</tr>
<tr>
<td>Diabetes screening (type 2)</td>
<td></td>
<td>Screen in those with sustained blood pressure (either treated or untreated) &gt;135/80 mmHg. USPSTF does not endorse a specific screening test or frequency but screening at least every 3 years with fasting plasma glucose is a reasonable method.</td>
<td></td>
</tr>
<tr>
<td>Healthy diet counseling</td>
<td>Offer intensive behavioral counseling by primary care clinicians or referral to other specialists (nutritionists or dietitians) to those with hyperlipidemia and other known risk factors for CVD. Largest effect has been observed with multiple sessions, 30 minutes or longer. Cardiac risk assessment calculator: <a href="http://hp2010.nhlbihin.net/atpiii/calculator.asp?usertype=prof">http://hp2010.nhlbihin.net/atpiii/calculator.asp?usertype=prof</a></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

†An “A” or “B” recommendation indicates the USPSTF found the net benefit of providing this service outweighed the harms. Complete USPSTF recommendations are available at http://www.ahrq.gov/clinic/USpstfix.htm.

Approved on 7/25/11
**Child/Adolescent Preventive Services**

<table>
<thead>
<tr>
<th>Immunizations*</th>
<th>See HealthTeamWorK Immunization Schedule for Children and Adolescents and/or use the Colorado Immunization Information System (CIIS) recommend function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Newborn hearing screening</td>
<td>Screen all newborns.</td>
</tr>
<tr>
<td>Congenital hypothyroidism screening</td>
<td>Screen all newborns.</td>
</tr>
<tr>
<td>Phenylketonuria screening</td>
<td>Screen all newborns.</td>
</tr>
<tr>
<td>Sickle cell disease screening</td>
<td>Screen all newborns.</td>
</tr>
<tr>
<td>Gonorrhea prophylaxis</td>
<td>Prophylactic medication for all newborns.</td>
</tr>
<tr>
<td>Iron supplementation</td>
<td>6-12 mos. if at increased risk for iron deficiency anemia (recent immigrants; premature, or LBW).</td>
</tr>
<tr>
<td>Dental caries</td>
<td>Oral fluoride supplementation 6 mos.-5 yrs. if primary water source deficient in fluoride.</td>
</tr>
<tr>
<td>Vision</td>
<td>Screen children ≤5 yrs. as part of well child care.</td>
</tr>
<tr>
<td>Obesity Screening*</td>
<td>Screen children ≥6 yrs. for obesity. Offer or refer to comprehensive, intensive behavioral interventions to promote improvement in weight status.</td>
</tr>
<tr>
<td>Cervical cancer screening</td>
<td>Screen within 3 yrs. of onset of sexual activity.</td>
</tr>
<tr>
<td>Chlamydia and gonorrhea screening</td>
<td>Screen sexually active females routinely. Rescreening at 6-12 months may be appropriate if previously infected.</td>
</tr>
<tr>
<td>HIV screening</td>
<td>Screen those with risk factors.</td>
</tr>
<tr>
<td>STI Prevention</td>
<td>High-intensity behavioral counseling for all sexually active adolescents.</td>
</tr>
<tr>
<td>Depression screening</td>
<td>Screen adolescents 12-18 yrs. for depression when systems are in place to ensure accurate diagnosis, treatment and follow-up.</td>
</tr>
</tbody>
</table>

**High Risk Adult Preventive Services**

<table>
<thead>
<tr>
<th>Preventive Services</th>
<th>High Risk Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abdominal aortic aneurysm screening with ultrasound</td>
<td>Screen men 65-75 yrs. once if ever smoked.</td>
</tr>
<tr>
<td>Genetic counseling and evaluation for BRCA testing</td>
<td>Refer women with defined risk (see high risk criteria).</td>
</tr>
<tr>
<td>Gonorrhea screening (often done with chlamydia)</td>
<td>Screen women ≤25 yrs. and women with risk factors.</td>
</tr>
<tr>
<td>HIV screening</td>
<td>Screen all adults with risk factors.</td>
</tr>
<tr>
<td>Syphilis screening</td>
<td>Screen all adults at increased risk.</td>
</tr>
<tr>
<td>STI Prevention</td>
<td>High-intensity behavioral counseling for adults at increased risk for STIs. Consider the community served (in practice populations with a high rate of STIs: all sexually active patients in nonmonogamous relationships). High-intensity counseling: Multiple sessions; total duration 3-9 hrs. (though shorter may be effective). May offer in a group setting.</td>
</tr>
